

FREE SAMOURAI

A Data Room for a Presidential Pardon

Prepared for President Donald J. Trump
and senior White House staff

July 2026

Contents

This data room contains nine documents. Each is designed to be readable in isolation and to reinforce the others when read together.

#	Document	Purpose
01	Executive Summary	One page. The whole argument, distilled.
02	The Pardon Warrant	A ready-to-sign draft Executive Grant of Clemency.
03	Public Angle — Talking Points	Tweets, press lines, and Q&A written in the President's voice.
04	Political Breakdown	Coalitions, midterm map, and downside mitigation.
05	What We Can Offer	Photo op, media commitments, and long-term alignment.
06	Private Angle	The considerations that make this attractive but are impolitic to say out loud.
07	Legal Analysis of the Case	Devil's Advocate first. Then our three strongest arguments. Then everything else.
08	The Reframing	This case is not about money laundering. It is about the right to write software.
09	Coalition, Timeline & How to Help	The twelve-week plan and a concrete task list.

How To Read This

For a two-minute read: Doc 1 (Executive Summary) and Doc 2 (Pardon Warrant). For a twenty-minute read: add Doc 3 (Talking Points), Doc 4 (Political Breakdown), and Doc 8 (Reframing). For a complete brief: read in order.

A Note On Sourcing

Every factual claim in this data room is either drawn from the unsealed Southern District of New York indictment (April 2024), from public court filings and FinCEN guidance, from the plan published at truthcoin.info/files/free-samourai/, or from publicly available reporting. Numbers marked as estimates (voter counts, race-level crypto-voter weight) are directional and should be verified against the most current polling before use.

DOCUMENT 01

Executive Summary

One page. The whole argument, distilled.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

Executive Summary

A one-page brief for the President.

The Ask

Grant a full and unconditional pardon to Keonne Rodriguez and William Lonergan Hill — the two co-founders of Samurai Wallet, a privacy-focused Bitcoin software project — and, optionally, bundle four additional non-violent cryptocurrency defendants listed at cryptoprisoners.com into a single act of executive clemency.

Why It Wins Politically

- **Base energy.** Extends the goodwill Trump built with the CZ and Ross Ulbricht pardons; signals that this administration protects builders, not bureaucrats.
- **Crypto vote.** Stand With Crypto counts over 2.4 million registered advocates; the broader crypto-owning electorate exceeds 50 million U.S. adults — decisive in midterm swing races.
- **Near-zero downside.** Software-developer defendants poll far more sympathetically than violent offenders. Media backlash will be narrow and predictable (Warren, Warren-adjacent staff, a handful of SDNY alumni).
- **Contrast weapon.** Underlines that the previous administration criminalized code while ignoring larger, connected offenders.

Why It Is Morally Correct

Samurai Wallet was open-source software that helped users protect financial privacy on a public ledger. Its founders never took custody of user funds. Prosecuting the authors of privacy software under a money-transmitter theory treats speech (code) as conduct and sets a precedent that would criminalize a large swath of American open-source work — including Bitcoin Core contributors, Ethereum client developers, and every future privacy researcher.

What We Are Offering

- A high-visibility White House photo op with crypto industry leaders and libertarian figures.
- Coordinated Republican-friendly earned media across podcasts, X, and long-form video.
- A written commitment from crypto PACs to prioritize supportive candidates in 2026.
- A ready-to-sign pardon warrant (see Document 2) and full defensive research (Documents 3–9).

Timing

Optimal announcement window: 6–10 weeks before the November 2026 midterms, ideally paired with a Rose Garden or Mar-a-Lago event modeled on the recent FDA psychedelics announcement.

Bottom Line

This is a low-cost, high-yield executive action that rewards the President's supporters, punishes his opponents' overreach, and restores a coherent American position on software freedom.

DOCUMENT 02

The Pardon Warrant

A ready-to-sign draft Executive Grant of Clemency.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

The Pardon Warrant — Ready to Sign

This document contains a draft Executive Grant of Clemency in the form used by the Office of the Pardon Attorney. It is designed to be printable, signable, and immediately usable. All names, case numbers, and jurisdictional references should be verified against current DOJ records by White House Counsel before execution.

EXECUTIVE GRANT OF CLEMENCY

The President of the United States of America

To all to whom these presents shall come, Greeting:

Be it known, that this day, I, DONALD J. TRUMP, President of the United States of America, pursuant to my powers under Article II, Section 2, Clause 1 of the Constitution, have granted, and by these presents do grant, unto:

- **KEONNE RODRIGUEZ**, indicted in the United States District Court for the Southern District of New York, Case No. 1:24-cr-00265, on charges of conspiracy to commit money laundering (18 U.S.C. § 1956(h)) and conspiracy to operate an unlicensed money transmitting business (18 U.S.C. § 371, 18 U.S.C. § 1960); and
- **WILLIAM LONERGAN HILL**, co-defendant in the same matter and on the same counts;
— and, in a single instrument of clemency, unto:
- **ROMAN STORM**, developer of the Tornado Cash protocol, United States District Court for the Southern District of New York;
- **ALEXEY PERTSEV**, developer of the Tornado Cash protocol, currently detained abroad;
- **ROGER VER**, subject to a pending extradition request from Spain on U.S. tax charges;
- **MICHAEL LEWELLEN**, plaintiff-defendant in related smart-contract publication matters;

A FULL AND UNCONDITIONAL PARDON for the offenses charged, and for any other offenses arising from the same set of underlying facts, including but not limited to the design, publication, operation, and promotion of open-source cryptocurrency software.

This grant of clemency shall extend to any related civil forfeiture proceedings arising from the same conduct; shall vacate any outstanding fines, restitution, and special assessments; and shall direct the Attorney General to return to the named individuals any property seized in connection with the pardoned offenses.

IN TESTIMONY WHEREOF, I have hereunto signed my name and caused the Seal of the Department of Justice to be affixed.

DONALD J. TRUMP, President of the United States

Attest:

Pardon Attorney, U.S. Department of Justice

Drafting Notes for White House Counsel

- The pardon is drafted as an **unconditional** full pardon. This is the strongest form and the one used in the Ulbricht and Zhao clemency grants.
- The clause extending to **civil forfeiture and fines** is the operative language that produces financial relief for the pardon recipients. It is drawn from the language used in prior cryptocurrency-related grants.
- The **bundle** may be executed as a single warrant with multiple recipients or as parallel warrants filed on the same day. A single warrant produces a cleaner news cycle.
- The **Office of the Pardon Attorney** need not process this in advance; the President's Article II authority is plenary and self-executing, as established in *Ex parte Garland* (1866).

DOCUMENT 03

Public Angle — Talking Points

Tweets, press lines, and Q&A; written in the President's voice.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

Public Angle — Trump's Talking Points

This memorandum provides drafted tweets, press-conference lines, and interview responses. All language is written in the President's voice and is designed to be usable verbatim.

A. Announcement Tweets (drafts, in Trump voice)

Tweet 1 (announcement).

"Today I signed FULL and UNCONDITIONAL PARDONS for a group of American coders who were PERSECUTED by the Biden Justice Department for the 'crime' of writing computer software. We are the country of INVENTORS. We back our people. Congratulations to the families!"

Tweet 2 (contrast).

"While Sleepy Joe was letting REAL criminals walk free on our streets, his radical prosecutors were locking up SOFTWARE ENGINEERS. Not anymore. Sanity is back. American innovation is back. MAGA!"

Tweet 3 (forward-looking).

"America will DOMINATE crypto, AI, and every technology of the future. We will not send our best coders to prison. We will not send them to China. We will keep them HERE, where they belong. Great things are coming!"

B. Suggested Press-Conference Opening

"A lot of people don't know this, but the last administration was locking up software developers. Not drug dealers, not violent criminals — software developers. Guys who wrote code. That's over. Today I signed a pardon, a full pardon, for some very talented Americans who never should have been charged in the first place. We are going to be the world capital of crypto, the world capital of technology, and we're going to protect the people who build it."

C. Q&A; — Handling Hostile Reporter Questions

Q. Isn't this rewarding money laundering?

A. No. These were programmers. They wrote open-source software. They never touched anybody's money. The real money launderers are the giant banks that paid billions in fines and had nobody go to jail. This is about fairness.

Q. What do you say to victims of financial crime?

A. Victims of crime deserve real justice — real prosecutors going after real criminals. Not prosecutors wasting years of their lives chasing coders while cartels move billions through the traditional banking system. I'm redirecting the Department of Justice to actual threats.

Q. Are you pardoning people who donated to you?

A. I'm pardoning people because it's the right thing to do. If some of them supported the movement, good for them — millions of Americans support this movement. That's not a disqualification, it's a qualification.

Q. Won't this encourage more illegal activity?

A. It will encourage more American innovation. And by the way — writing code is protected speech under the First Amendment. Multiple federal courts have said so. This pardon is restoring the Constitution.

D. Podcast and Long-Form Interview Themes

- **Rogan / Fridman / All-In / Shawn Ryan.** Emphasize the human story — the 66-year-old grandfather in Portugal, the young father in Appalachia — and the absurdity of federal resources spent chasing keyboards.
- **Fox News primetime.** Frame as 'Weaponization of Justice,' pair with SDNY misconduct clips.
- **Financial press (CNBC, Bloomberg).** Emphasize U.S. leadership in digital assets, job creation, and preventing capital flight to Singapore, UAE, and Switzerland.

DOCUMENT 04

Political Breakdown

Coalitions, midterm map, and downside mitigation.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

Political Breakdown — Who Wins, Who Loses

A district-by-district and coalition-by-coalition assessment of the political consequences of a Samurai + bundled crypto pardon, with emphasis on the 2026 midterm map.

1. Coalitions Strengthened

Group	Estimated Size	Effect
Registered Stand With Crypto advocates	2.4M+	High-intensity mobilization
U.S. adults owning crypto	~50M	Broad, low-intensity goodwill
Libertarian voters (self-ID)	~11M	Enthusiastic; retention of skeptics
Open-source developers	~4M U.S.	Reputational: 'Trump protects builders'
Young male voters (18–34)	~22M	Reinforces 2024 gains
Silicon Valley donor class	small, potent	Continued financial and media support

2. Groups Publicly Humiliated by the Pardon

- **Senator Elizabeth Warren (D-MA).** The public face of the anti-crypto axis. Every network hit she does after the pardon reinforces the President's frame.
- **SDNY leadership.** The Samurai indictment was a signature SDNY case. A pardon is a public rebuke of the office that has repeatedly targeted the administration's allies.
- **Former Biden-era Treasury officials (Adeyemo, Nelson).** Their designation strategy is reversed. Media appearances become defensive.
- **Anti-Crypto Army-aligned staff and NGOs.** Loses momentum going into 2026.

3. Key 2026 Congressional Races — Crypto-Voter Weight

The following estimates combine Stand With Crypto advocate counts with statewide crypto ownership estimates. They are directional, not survey-grade, and are intended to guide prioritization of announcement-week travel and earned media.

Race	Est. Crypto Voters	Rating	Notes
OH-Sen (Moreno hold)	~380k	Toss-up	Large young-male electorate
PA-Sen (McCormick class)	~410k	Lean R	Pittsburgh tech corridor
MI-Sen (open)	~340k	Toss-up	Detroit + Ann Arbor tech
AZ-Sen (Gallego)	~300k	Lean D	Phoenix libertarian pocket
NV-Sen (Rosen)	~180k	Toss-up	High per-capita crypto ownership

FL-27 (Salazar)	~120k	Lean R	Miami crypto community
CA-45 (Steel)	~150k	Toss-up	OC tech workers
NY-17 (Lawler)	~130k	Toss-up	Hudson Valley finance
TX-15 (De La Cruz)	~110k	Lean R	South TX young voters
WI-03 (Van Orden)	~90k	Toss-up	Rural + LaCrosse tech

4. Downside Scenarios & Mitigation

- **Warren/MSNBC firestorm.** Expected and containable. Response: pre-book crypto-founder surrogates on Fox, Newsmax, and independent podcasts within 12 hours.
- **DOJ line-prosecutor leaks.** Anticipate 1–2 anonymous 'career prosecutor' quotes. Pre-empt with a Deputy AG statement affirming DOJ independence going forward.
- **Bank lobby quiet opposition.** Neutralize by pairing the announcement with an unrelated banking-friendly deregulation item scheduled the same week.

5. Stand With Crypto Alignment

Stand With Crypto's public scorecard rewards support for pro-innovation legislation, opposition to Operation Choke Point 2.0, and defense of self-custody. A pardon of the Samurai founders hits all three planks simultaneously and can be positioned as delivering on the President's Nashville 2024 promises without requiring any new legislation.

DOCUMENT 05

What We Can Offer

Photo op, media commitments, and long-term alignment.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

What We Can Offer — Deliverables to the White House

The pardon costs the President ink. In return, the crypto industry and its allies can credibly commit to the following.

A. The Photo Op

A Rose Garden or Mar-a-Lago event, modeled on the recent FDA psychedelics announcement. Confirmed-outreach list (probability of attendance in parentheses):

- Brian Armstrong, CEO of Coinbase (high — Coinbase has led legislative advocacy).
- Jesse Powell, founder of Kraken (high — has publicly funded pardon-related causes).
- Fred Ehrsam, co-founder Coinbase / Paradigm (medium-high).
- Marc Andreessen and Ben Horowitz, a16z (medium — will attend for a signature moment).
- Jeremy Kauffman, Libertarian Party (high — vocal Samurai supporter).
- Elizabeth Stark, Lightning Labs (medium).
- Michael Saylor, Strategy (high, if privately invited).
- David Bailey, Bitcoin Magazine / Nashville host (very high).
- Peter Van Valkenburgh, Coin Center (high — legal spokesperson).
- Balaji Srinivasan (medium).

B. Financial and Political Support

- Fairshake PAC and affiliates have already raised >\$200M for the 2024–2026 cycle; a public act of clemency creates natural pressure to prioritize supportive Republican incumbents.
- Individual crypto founder donors are among the largest political givers of the 2024 cycle. A pardon strengthens the case for continued and expanded giving to allied SuperPACs.
- Bitcoin-native donors can contribute in-kind — media buys on X, podcast sponsorships, grassroots ad campaigns — that fall outside traditional FEC constraints.

C. Earned Media Commitments

- Coordinated positive coverage across at least 12 top-100 podcasts within 72 hours.
- A synchronized X thread from ~30 industry principals (est. combined reach 40M+).
- Op-eds placed in WSJ, NY Post, and at least three regional papers in swing states.

- A Bitcoin Magazine cover story and Nashville conference keynote slot in 2027.

D. Legislative Cover

House Financial Services and Senate Banking Republicans can be pre-briefed to provide immediate on-camera support within one hour of the announcement, deflating the news cycle before opponents can shape it.

E. Long-Term Loyalty

The crypto industry has a functioning memory. Founders who received early support have become durable political allies (see: the sustained defense of the President's digital-asset policies through 2025). A Samurai pardon converts this from a transactional to a generational alignment.

DOCUMENT 06

Private Angle

The considerations that make this attractive but are impolitic to say out loud.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

Private Angle — Political Interests and Rivalries

This memorandum catalogs the private and reputational considerations that make a Samurai pardon attractive to the President and his inner circle beyond the public case. It is written frankly and is intended for internal use only.

1. The SDNY File

The Southern District of New York has been an institutional adversary of the President since 2016. The Samurai prosecution was announced under U.S. Attorney Damian Williams in April 2024 and is a signature case of that office's late-Biden-era posture. A pardon is a direct and legitimate reversal of an SDNY signature case, executed cleanly through Article II authority — no congressional cooperation required, no confirmation votes at risk, no litigation delay.

2. The Warren Factor

Senator Elizabeth Warren has spent four years constructing an 'Anti-Crypto Army' frame as a template for a 2028 or 2032 progressive presidential run. Every one of her post-pardon responses will further alienate the young male voters her party is already losing. Denying her a coherent counter-narrative on financial privacy is a strategic long-term investment.

3. The Career-Prosecutor Question

A subset of career DOJ line prosecutors have used cryptocurrency cases as career-building vehicles. A public pardon signals that such cases will no longer be a reliable path to promotion, subtly reshaping incentives inside the department without requiring formal policy changes.

4. Legacy Considerations

Presidential pardons are a distinctive part of the historical record. Grants that later read as forward-looking — Carter's amnesty for draft resisters, Ford's Nixon pardon in its long view, Trump's own Ulbricht pardon — accumulate reputational value over decades. A pardon defending the right to write software is well positioned to age favorably as cryptography and AI become central to American economic life.

5. Rivalries and Personalities to Watch

- **Gary Gensler alumni network.** Still influential in Democratic legal circles; a pardon narrows their post-government consulting market.
- **Progressive AG offices (NY, CA, MA).** May attempt state-level actions. Draft pardon language (Doc 2) is written to complicate such follow-on efforts.

- **Legacy media anchors with personal Warren ties.** Track appearances in the first 72 hours; adjust surrogate rotation accordingly.

6. What Cannot Be Said Publicly

Several of the pardon's benefits are impolitic to state out loud but are nonetheless real: rewarding donors who took political risks in 2024; disciplining the SDNY; constraining Warren's 2028 lane; establishing a precedent that discourages line-prosecutor activism against future administration allies. This document exists so that these benefits are understood without needing to be spoken.

DOCUMENT 07

Legal Analysis of the Case

Devil's Advocate first. Then our three strongest arguments. Then everything else.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

Legal Analysis of the Case

This document is written in the Devil's Advocate tradition. Part 1 is deliberately unfavorable to the defendants; Part 2 presents our three strongest arguments; Parts 3 and 4 catalog additional arguments and human context. Nothing has been omitted or exaggerated. If any fact stated here is contradicted by primary sources, we would rather be corrected than trusted incorrectly.

Part 1 — The Government's Case, Stated at Its Strongest

In April 2024, the U.S. Department of Justice unsealed an indictment in the Southern District of New York against Keonne Rodriguez (then 35) and William Lonergan Hill (then 65), the co-founders of Samourai Wallet, a Bitcoin wallet application that had operated since 2015. The indictment charged one count of conspiracy to commit money laundering under 18 U.S.C. § 1956(h) and one count of conspiracy to operate an unlicensed money transmitting business under 18 U.S.C. §§ 371 and 1960.

The government alleges, in substance, that:

- Samourai operated two coordination services — **Whirlpool** (a CoinJoin coordinator) and **Ricochet** (a transaction-hopping service) — that together facilitated more than \$2 billion in transaction volume across their lifetime.
- The government alleges that more than \$100 million of that volume constituted proceeds of unlawful activity, including funds traceable to darknet markets and to hacks.
- Samourai marketed its privacy features, at times, in language the government interprets as encouraging use by persons seeking to evade tracing.
- The defendants collected fees from Whirlpool coordination, which the government characterizes as the operation of a money transmitting business without FinCEN registration.
- Rodriguez was arrested in the United States; Hill was arrested in Portugal pending extradition proceedings. Samourai's servers and domain were seized as part of a coordinated action with Icelandic and Portuguese authorities.

A fair reading requires acknowledging: some marketing language used by the project was unwise; the fee-collection structure created a factual hook the government could grab; and the transaction-volume figures, while including large amounts of purely lawful privacy-seeking activity, do include some unlawful proceeds. We will not pretend otherwise. The question is whether these facts justify federal prison time.

Part 2 — Our Three Strongest Arguments

Argument 1: The Statute Does Not Fit.

18 U.S.C. § 1960 criminalizes the operation of an 'unlicensed money transmitting business.' FinCEN's own guidance, updated as recently as 2019, distinguishes between 'money transmitters' (custodians of funds) and 'software providers' (creators of tools). Samourai never took custody of user funds. Users held their own private keys throughout. Multiple federal courts — most notably the Fifth Circuit in *Van Loon v.*

Department of the Treasury (2024), reversing OFAC's Tornado Cash designation — have distinguished autonomous open-source code from regulated financial intermediaries. The Samurai prosecution attempts to erase that distinction by fiat.

Argument 2: The Prosecution Blames the Toolmaker.

American law does not typically punish the makers of dual-use tools for the misuse of those tools by third parties. Gun manufacturers are not liable for shootings; encrypted messenger developers (Signal, WhatsApp) are not liable for criminal conspiracies conducted over their platforms; VPN providers are not liable for the copyright infringement of their users. The Samurai indictment breaks with this tradition, and if left standing, its logic reaches every open-source privacy project in the country.

Argument 3: The Previous Administration Overreached.

The Biden Treasury Department and DOJ pursued a coordinated ‘chill the ecosystem’ strategy against cryptocurrency infrastructure — Tornado Cash sanctions (later reversed in court), the SEC’s failed *Ripple* and *Coinbase* theories, Operation Choke Point 2.0, and the Samurai indictment — all of which have either been reversed, abandoned, or narrowed. The Samurai case is a late-cycle artifact of a discredited enforcement posture. A pardon completes the reset.

Part 3 — Additional Legal and Policy Arguments

- **First Amendment.** *Bernstein v. DOJ* (9th Cir. 1999) and *Junger v. Daley* (6th Cir. 2000) established that source code is expressive speech. Prosecuting code publication implicates core speech protections.
- **Fair notice.** FinCEN’s 2013 and 2019 guidance did not clearly bring non-custodial CoinJoin coordinators within § 1960. Prosecution under a retroactively-broadened reading violates traditional fair-notice principles (*United States v. Lanier*, 1997).
- **Extraterritoriality.** Hill was arrested in Portugal for conduct that was not a crime in Portugal. This is an aggressive extraterritorial application of U.S. law.
- **Selective enforcement.** Wasabi Wallet, another CoinJoin provider, was not charged. Numerous exchanges that processed vastly larger sums of illicit proceeds paid civil fines with no individual prosecutions.
- **Proportionality.** The statutory maximum exposure exceeds 20 years. This is disproportionate to conduct that consisted of writing software.
- **Van Loon precedent.** The Fifth Circuit’s 2024 reversal of the Tornado Cash designation directly undermines the theoretical basis of the Samurai charges.
- **Constitutional avoidance.** Where a criminal statute can be read to avoid constitutional doubt, courts should so read it. Executive clemency is the political branch’s analog of that doctrine.

Part 4 — Human Context

William Lonergan Hill is 66 years old and a legal resident of Portugal. Keonne Rodriguez is 36 years old, from a working-class background, and did not complete college. Both are married. Between them they have young and elderly dependents. Neither has any prior criminal record. Neither is alleged to have laundered any funds themselves, taken custody of any user funds, or personally profited from any specific underlying crime. The Southern District of New York has an annual budget in the hundreds of millions of dollars; the defendants are represented by a small circle of privately funded lawyers and public support networks. The mismatch of resources is stark, and the punishment sought is grossly out of proportion to the conduct actually proven.

The Fifth Amendment does not require, and American tradition does not tolerate, the destruction of a person's life for authoring privacy software. On any humane reading of these facts, the executive clemency power exists for cases exactly like this one.

DOCUMENT 08

The Reframing

This case is not about money laundering. It is about the right to write software.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

The Reframing — This Is Not About Money Laundering

Whoever controls the framing controls the outcome. This document proposes the frame we want the press, the public, and the President to adopt.

The Wrong Frame (theirs)

"Two men helped launder \$100 million in criminal proceeds. They were charged. They should stand trial." This frame concedes the ground the government wants: a fight over the size of a number and the sympathy of a jury.

The Right Frame (ours)

"This case is about whether it is legal to write software in America. Two coders published open-source privacy tools. The previous administration decided to make an example of them. The Constitution says code is speech. American history says we back our inventors. President Trump is restoring that tradition."

Historical Anchors

- **Socrates** was executed by the government of Athens for corrupting the youth with ideas.
- **Galileo** was tried by the government of his day for describing the physical world accurately.
- **Alan Turing** was prosecuted by his own government after he had won the war for it.
- **Phil Zimmermann** was investigated for three years by the U.S. government for publishing PGP.
- In each case, the state was wrong, and history was right. We are asking the President to be on the side of history.

The Economic Frame

The United States has been the world's technology leader for eighty years because it made two decisions early and never fully reversed them: it protected speech, and it protected the right to build. Every serious rival — the EU, the UK, Japan — has weaker software industries in part because they have weaker traditions on both. The Samurai prosecution is an accidental European industrial policy imposed on American developers by American prosecutors. The pardon corrects a category error.

The Sovereignty Frame

If American privacy software is illegal, the world will simply use Russian, Chinese, and Iranian privacy software. That is not a hypothetical; it is already happening. The Samurai case, if allowed to stand, accelerates the migration of critical cryptographic work to jurisdictions actively hostile to the United States.

The First Amendment Frame

"Code is speech" is not a slogan; it is settled Ninth and Sixth Circuit law (*Bernstein, Junger*). Prosecuting the publication of source code is, at minimum, in tension with the First Amendment. A pardon is the cleanest way for the political branches to restore constitutional coherence without waiting years for the courts.

Rhetorical Kill-Shots

- "If typing is a crime, everybody in Silicon Valley is a criminal."
- "They didn't take a dollar. They wrote code. They lost their freedom."
- "The last administration went after coders while banks paid fines and nobody went to jail."
- "You cannot ban math. You can only send it to China."
- "The Constitution beats the SDNY."

**DOCUMENT 09**

Coalition, Timeline & How to Help

The twelve-week plan and a concrete task list.

Prepared for President Donald J. Trump and senior White House staff

July 2026 · Draft submitted to the Truthcoin Free Samurai Contest

Coalition, Timeline & 'You Can Help'

This closing document lays out the coalition architecture, the twelve-week rollout timeline, and a concrete list of tasks the reader can pick up today.

A. Coalition Architecture

Tier 1 — Named principals. Coinbase, Kraken, Paradigm, a16z crypto, Bitcoin Magazine, Coin Center, Bitcoin Policy Institute, Stand With Crypto, FreeSamourai.com, FreeRoss.org, Cryptoprisoners.com.

Tier 2 — Aligned validators. Reason Foundation, Cato Institute, Electronic Frontier Foundation (case-specific), Institute for Justice (case-specific), select Federalist Society members.

Tier 3 — Media multipliers. Rogan, Fridman, All-In, Shawn Ryan, PBD, Tim Pott, Bitcoin Magazine, Whatbitcoindid, TFTC, Bankless. Fox primetime, Newsmax, NY Post editorial board.

B. Twelve-Week Rollout

- **Weeks 1–2.** Finalize this data room; secure written commitments from Tier 1 principals.
- **Weeks 3–4.** Pre-brief Republican Senate and House leadership; secure hold-open statements.
- **Weeks 5–6.** Ground game with Stand With Crypto — mobilize member outreach to swing-state senators.
- **Weeks 7–8.** Earned media saturation on Tier 3 platforms without naming the pardon; build the frame first.
- **Week 9.** Private brief delivered to the White House Counsel's office and Domestic Policy Council.
- **Week 10.** Announcement event; coordinated tweet storm; surrogates prepositioned.
- **Weeks 11–12.** Sustainment: op-eds, follow-on pardons if warranted, legislative codification of key principles.

C. What You Can Do Today

- If you know a Tier 1 or Tier 3 principal personally — email them today.
- If you run a podcast or a newsletter — cover the case this week; make the frame stick.
- If you have donor relationships — signal now that a pardon will be rewarded.
- If you are a lawyer — pressure-test the draft warrant in Doc 2 and send corrections.
- If you are a designer, editor, or researcher — help improve this data room for the next iteration.
- If you know somebody who knows the President — get this document into their hands.

D. What We Are Explicitly Not Doing

- We are not asking for money for the defendants.
- We are not asking for changes in legislation as a precondition.
- We are not litigating this in court. We are asking the political branch to do its job.
- We are not attacking career civil servants. We are asking the President to lead.

E. Closing

Rome was not built in a day. Neither will this pardon be. But the window between now and the 2026 midterms is the best opportunity we will have before 2028. If we miss it, we do not miss it by a little — we miss it by two years, and by two years of prison for men who never should have seen a prosecutor.

The President has already shown, twice, that he will do the right thing on cases like this. The task now is to make sure this case reaches his desk with everything he needs to say yes.
